

# Weather Adventures Installation Instructions

Melodie Collins, Joey Le, Peter Nelson, Angela Pelky, Alexa Roskowski - 03/12/2023

## 1. User Documentation Revision History

Date	Author	Description
03/12/023	JL	Created Initial Version
03/12/2023	All	Turned In Final Version for Project 2 Final Project Assignment on Canvas.

## 2. Installing Weather Adventures

1. Download the ZIP file from the GitHub repository listed here:

<https://github.com/LeQP/422-Weather-Adventures>.

2. Extract the file and have its contents be contained in a folder named "422-weather-adventures"

3. Open the terminal on your computer (Powershell/CMD on Windows, Terminal on Mac/Linux).

4. Navigate to the directory that has the folder in it or move the folder to your current working directory.

5. From there, go in the 422-weather-adventures directory. This is done by typing in "cd 422-weather-adventures" in the directory that has the folder.

6. Before you run the program, make sure you have the listed module installed on your computer:

- Pillow
- Requests

To install them, type in "pip install Requests" to install the Requests module and "pip install Pillow" to install the Pillow module in your terminal.

7. Type "python weather\_adventures.py" to run the program. It will take a few seconds for the graphic user interface to appear for you to interact with the program.
